

# Worm Calc User Guide

Kyle Moy

February 10, 2016

## 1 Usage

The WormCalc takes 4 parameters in this order, separated by spaces:

1. Input path to the tracker log ("log/log.dat", or "log/tracker.log" if from the old tracker)
2. Input path to the data from the segmentation software ("log/features.log")
3. Output path to where movement feature data will be written
4. Output path to where cell occupancy data will be written

## 2 Example

Listing 1: Arbitrary Input Output Paths

```
java -jar WormCalc.jar C:/log.dat C:/features.log  
C:/movementFeatures.csv C:/cellOccupancy.csv
```
